1. Objective

Automate the processing of WI1 work items in the ACME System to validate the client account information with the highest levels of accuracy, compliance, and efficiency. The solution must also enable automated email notifications for reporting abnormalities in account numbers or account amounts. This is critical for business integrity, as inaccurate account balances can result in severe consequences: over-crediting clients leads to financial losses for the company, while under-crediting damages reputation, erodes customer trust, and risks regulatory non-compliance.

1.1. Business Objectives and Benefits

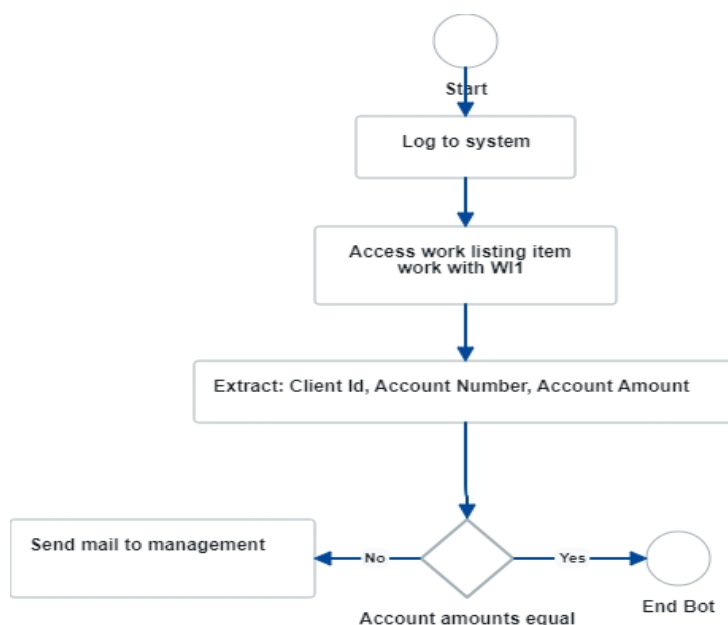

Objectives	Expected Benefits
Automate WI1 work item extraction and processing	Reduce manual effort and save employee time
Ensure accurate validation of client account details	Improve data accuracy and minimize human errors
Implement rule-based decisions for account status (Active/Suspended)	Enhance compliance and standardize decision-making
Automate communication with management via email notifications	Improve transparency and speed in issue escalation
Mark work items as completed after processing	Ensure smooth workflow tracking and reporting

2. Current Process

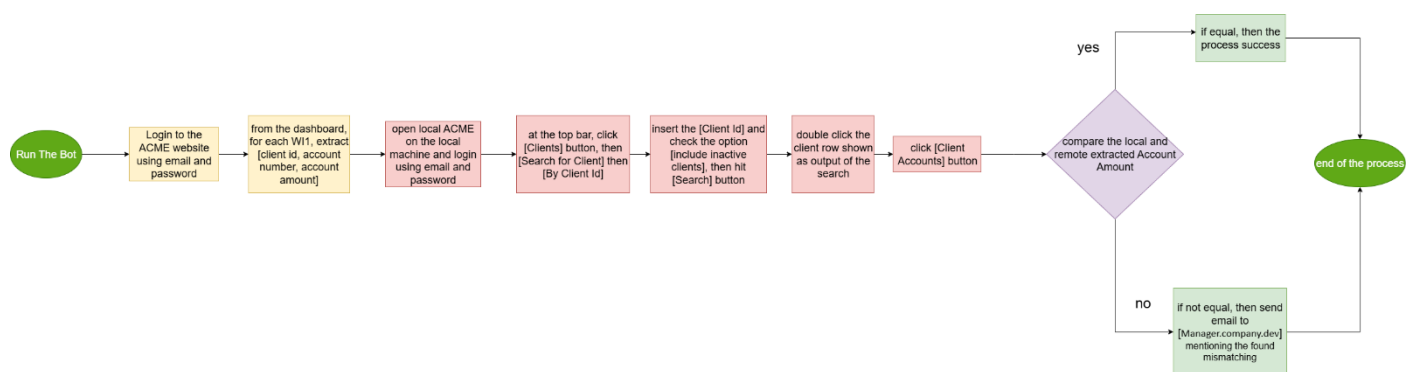

2.1. Process Overview

Currently, WI1 work items in the ACME System are processed manually by operations staff. The process involves retrieving client account data, validating account numbers and balances, updating discrepancies, and escalating abnormalities to relevant teams via email. Manual execution is time-consuming, prone to errors, and highly dependent on staff availability, which impacts overall efficiency and accuracy.

2.1.1 High Level Process Diagram

2.1.2 Detailed Process Map

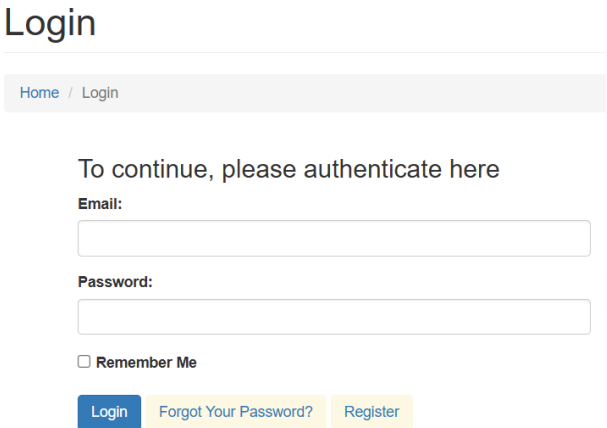

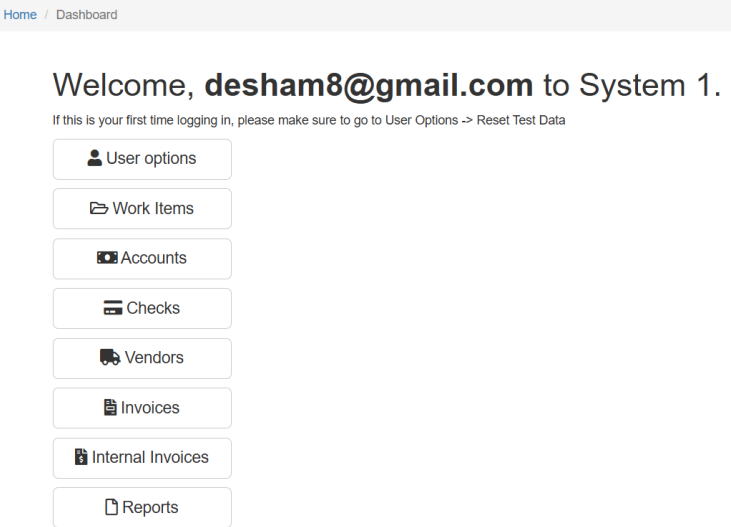

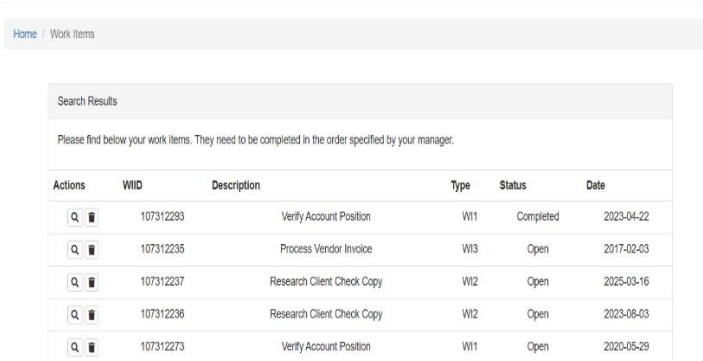

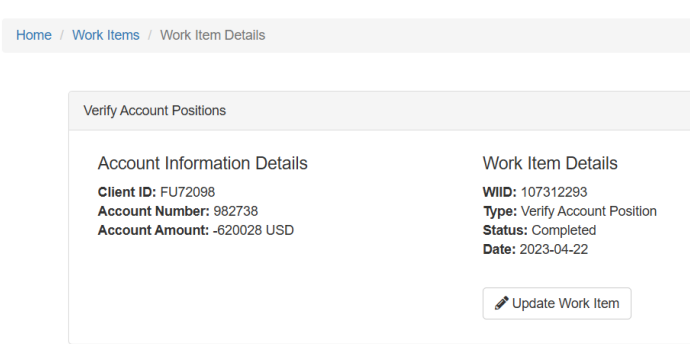

2.2. Standard of Metrics

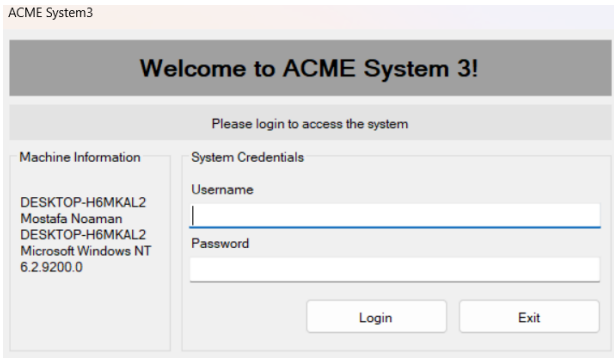

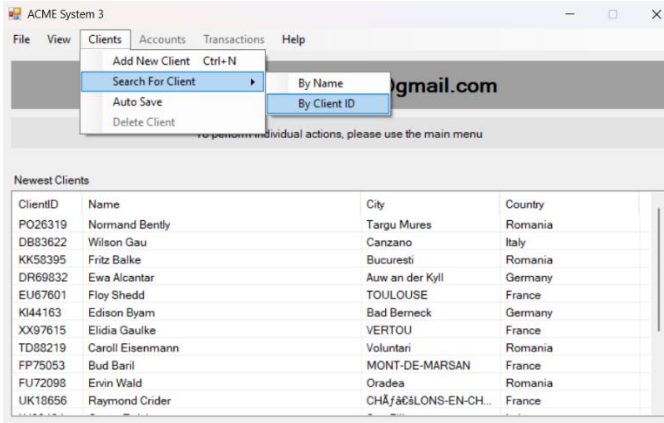

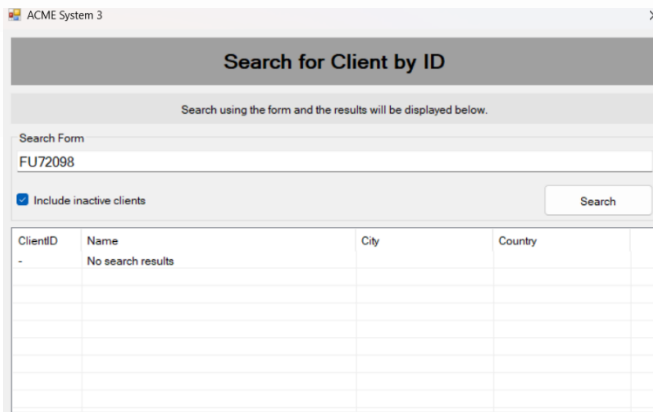

General information about the process selected for RPA, prior to automation:

Process name	W11 Client Account Validation and Update
Function	Account Management / Data Validation
Department	Operations / Finance
Process short description	Manual validation of client account details from W11 work items in ACME System, including anomaly reporting via email
Process schedule	Daily, during business hours
#of items process/month	~12,000 (approx. 600 per business day)
Average cycle time	10–15 minutes per work item
Average handling time	8–10 minutes per work item
Peak period(s)	Month-end, Quarter-end, and Year-end financial closing periods
# of FTE supporting this activity	4–6 full-time employees
Input Data	W11 work items, client account records, transaction logs
Output Data	Updated client account information, anomaly reports (via email)
Return on investment	High — automation reduces manual effort, improves accuracy, accelerates processing, and mitigates financial/reputational risk

Detailed Process Steps

1.1	Open the ACME System 1 Web Application		Opening of a screen : System 1 Web App	Possible exception: - Handle exception if <i>Web app not available</i>
1.2	Log in to System 1 (input data: email and password)		Access to the dashboard	Possible exception: - Handle exception if <i>Incorrect email or Password</i>
1.3	Access the Dashboard, Select Work Items		Show the work items at the top	

1.4	Access the Work Items Then WI1	Work Items 	List of all work items	Possible exception: under work items, the work items are not listed. [to solve, hover over User Options, reset test data, click the blue button Reset Test Data]
1.5	For each activity of the type WI1 perform the following steps			
1.6	Open the Details page for the selected activity from the magnifying glass sign		Show the information [client id, account number, account amount]	
1.7	Retrieve the Information: Current ID Account Number Account Amount	Work Items - Work Item Details 		

1.8	Download and Open Acme on the System			
1.9	Login with email and password		Show email and password inputs	Possible exception: - Handle exception if Incorrect email or Password
1.10	Select Clients from the top bar, then: Search For Client -> By Client ID		See the clients button at the top bar, and when click on it, see [search for clinets] and when choose it, see [by client id]	
1.11	Fill the Client Id scraped from the previous steps, and check the box: Include inactive clients Click search button		See the input search widget to enter the client id	

1.12	You can see the Client Id listed now, double click on the Client output row		The client is clearly shown	
1.13	Click Client Accounts button		The client Accounts button is shown at bottom left	
1.14	Now, you can check if the current Account Number is [Active] from the Status, if it's active then compare the Amount here with the extracted one previously from the website. In case of non equal account amounts, send email to: Manager.company.dev in case of Account Status is [Suspended] send mail to the same email address with this and any found active account numbers for that clients		Get all the found accounts for the same client.	

2.3. Volume of data

Activity	Time taken per month (hours)	Volume of data to be processed
Scraping WI1 cases from ACME	60	~12,000 cases
Manual validation of client accounts	540	~12,000 records
Updating details in ACME system	360	~10,800 valid records
Reporting anomalies via email	120	~1,200 anomaly cases
Quality check / review	120	~1,200 records
Total	1,200	~12,000

The activity volumes and time estimates are calculated based on an average monthly workload of ~12,000 WI1 cases. The distribution assumes that all cases undergo scraping and validation, with approximately 90% proceeding to system updates and ~10% requiring anomaly reporting. Additionally, ~10% of the total cases are subject to quality checks. These figures are indicative and should be validated against actual process logs to ensure accuracy before automation.

3. Business Rules

The following business rules are those that must be adhered to as the process runs.

BR#	Requirement	Additional Information
BR1	Each WI1 case must have a valid client account number before processing.	If the account number is missing or does not match the company's master data, the case must be flagged for review.
BR2	Only active accounts should be active.	Accounts marked as "suspended" in ACME System must be skipped and logged as exceptions.
BR3	All system updates must generate an audit log.	The log should contain WI1 case ID, action taken, timestamp, and user/bot ID.

4. Detailed Process Steps – AS IS

The process is handled manually by FTE, so it's slow, inaccurate and may lead to confusion between them, so to convert it to the to-be will make it better and fast

5. To-be Pre-process steps (Proposed solution)

the process should now instead of depend on employees for searching, detecting the "Account Amount" for the WI1 and send automated emails if founded suspended accounts already in the website that no longer reflect actual data, or if it detects any kind of account amount mismatching.

6. In Scope

The table below shows the high-level steps that are in scope for the automation.

Process step	Comments
Extraction of WI1 work items from ACME System	Includes logging into ACME, navigating to WI1 queue, and scraping required case data.
Validation of client account number	Check existence and activity of account number in ACME database under the client id.
Validation of account amount	Compare system-recorded amount with source/reference data to ensure accuracy.
Email notifications for abnormalities	Generate and send emails to designated stakeholders when discrepancies in account number or amount are detected.

7. Non-process requirements

8.1. Systems

System	Usage	Frequency
ACME System	Primary application for retrieving WI1 cases, validating client account data, and updating records.	Daily (multiple times per day, depending on workload)
Email (Outlook / Internal Mail System)	Sending automated notifications regarding discrepancies or validation failures.	Daily (triggered only when exceptions occur)
Excel / CSV Files	Used for storing extracted case data and logs of processed transactions for audit/reporting.	Daily (per batch run)

8.2. Reporting

Report name	Source	Purpose
Daily Processing Log Report	Automation logs (Excel/CSV generated by the bot)	To track number of WI1 cases processed, success rate, and exceptions raised each day.
Exception Report	Automation exception handling (captured from ACME + bot logs)	To list cases that failed validation or could not be processed automatically, requiring manual intervention.
Monthly Performance Report	Consolidated data from automation logs	To provide insights on total items processed, average handling time, time saved, and ROI metrics.

9. Appendix

Open Questions

Date written	Date of response	Question / comment	Response from reviewer
28-Aug-2025	30-Aug-2025	Please confirm if reporting (daily/weekly) should be generated automatically..	Yes after this process, it will be automated for both the weekly and daily.
31-Aug-2025			

Escalations

For immediate contacts for the process automation project, kindly contact the respective contact on the table below:

Email Address	Roles	Responsibilities
robertchapman@company.com	Project Manager	If any blockers come up which stop the progress of the work
Harpreetsethi@company.com	Project Sponsor & Director of HR	For queries on budget & resource requirements / challenges
kathywhite@company.com	Business Analyst	Further clarification on process, business rules & scope of activities
